Subject: RE: Question

Thanks Betsy. I pulled the RIR earlier and got the same info as described below (i.e. acreage of FWS portion of site; variable depth of waste material, and the soil concentration figures you reference). I think we're good for now. One thing I did notice in my info searches today, was that a significant portion of the vertical delineation activities (as per our July 2015 correspondence with EPA) will be conducted during the pre-design phase. I need to keep that on my radar when I send you our responses.

PS: I haven't gotten a firm response yet from my TC yet in regard to the status of his FS review. Will keep trying.

PPS: Will send the ARS approval once I get the revised electronic version with the revised title.

PPPS: No more emails..... Pour yourself a glass of wine and call it a day!!!!

Subject: RE: Question

Hi Jill, Off the top of my head... FWS part of the site is about 30 acres. Landfill material depth varies and has been documented up to about 18 feet at the site in general – all areas. I can look at the test pit data on the FWS part of the site and get an estimate of average depth of fill for that part of the site. I may be able to do that tomorrow. Much of the fill is municipal waste. The RI figures 4.1c and 4.1d have the soil contaminant info. I can send them to you tomorrow if that helps. And I know you asked about vapor intrusion data – I will get back to you on that too. Sorry for the rushed responses, I've been out of the office today and wanted to get back to you with what I know. I will call you tomorrow to make sure I know what you need! Thanks...

Subject: Question

Hi Betsy. In an attempt to resolve some of the issues we discussed yesterday, my supervisor has requested some information regarding the RK site that I don't know off the top of my head. I was hoping you might know the following:

Do you have a rough estimate of the volume of contamination on the Fish and Wildlife portion of the site?

Also do you know the depth of the contamination and contaminants (presumably on the FWS portion)?

Since I don't know that sort of info off the top of my head, I'm going to pull some of the old reports to see if I can answer his questions. In the meantime, I was wondering if you had anyone on your team that might have that info readily available.

Thanks in advance! - Jill
